

Adult 2009 female Tessera breeder. She lays two clutches of eggs annually, averaging 24 eggs per season. Though I have never tried to prove her genetics, two of her sisters turned out to be het Sunkissed. I've always bred her to High-white Reverse Okeetees because her babies have such high volume of black markings. She is 46" long and weighs 415 grams *empty*, eating frozen/thawed adult mice. Her \$350.00 USD price includes She is slated for brumation next week.
