

## Show & Tell

Featured as S.O.T.D. October 26, 2017, on this web site and SMR FaceBook page when this eXtreme Reverse Okeetee Tessera (and her only 2017 sibling) had not yet sloughed their first skins, she now demonstrates one of the usual deformities associated with insemination from a previous season's mating; *her cranium is slightly domed*. **Bonus PIC**
