

A low-white Pied-sided Bloodred to be sure, but this one's also Ultramel. Therefore, when bred to a Fire she will infuse the P/S gene mutation into that line. Bred to a P/S Bloodred Het for Amel (therefore het for Fire), she should yield some P/S Fires since the Ultramel genotype is co-dominant to Amel. Like all Ultra types (including Ultramels) she is an inter-species hybrid from Gray Rat Snake origins.
