31" female 2017 Striped Amel corn snake for sale. Seeing very little striped markings and lots of what we sometimes call "tweener" blotches, if you breed her to a Striped Amel phenotype, you will get classically Striped Amels, some like this snake, and some in-between, with regard to pattern. She is currently eating frozen/thawed hopper mice. If she stays here, I expect her to breed for us in 2019. \$175.00 plus \$39.00
