

M

Most Commonly Used Name:

Mode of Genetic Inheritance: recessive

Type: Triple mutation compound

Eye Color: **Red** pupil

Go to [History](#) or more details about the **DIFFUSED / BLOODRED** base mutation of this compound morph.

What to expect:

Som

General Note:

While most of the snakes we produce will mature to resemble the featured adult image(s) on our web site, unlike manufactured products that are respectively identical to each other, the nature of polygenic variation results in no two specimens being exactly the same. The snake we select for you may not mature to be identical to the pictured examples, but will be chosen based on our experience of observing which neonates will mature to properly represent their respective morph. We take this responsibility very seriously, and therefore publish the guarantee that we will replace your SMR snake if it does not mature to be like our advertised examples.
