Striped Butter

male

d.o.h. 2012

20" long on May 1, 2013

\$110.00 shipped

This 20" long male Striped Butter is eating frozen/thawed fuzzy mice.

More information about Sunglow Corn Snakes

Striped Butter (no aka)

Most Commonly Used Name: Striped Butter

Mode of Genetic Inheritance: Recessive

Morph Type: Mutation compound (Butter & Stripe)

Eye Color: Red pupil & *body ground-colored* iris

This compound morph results from combining the color mutations Amel + Caramel = Butter and the pattern mutation, Stripe. Color hues and shades & pattern are variable, but it is apparent that the Striped mutation has a color impact upon the Butter corn's coloration, and that impact is one of enhancement. I don't recall ever seeing Striped or Motley Butter that was not more deeply yellow than Butter mutants without a pattern mutation.

What to expect:

Expect most neonates to have surprisingly low quality yellow (compared to adults), and pattern on some may actually be brown for up to a year or longer. I have personally never seen one retain non yellow colors, so be patient. In six to 18 months, all other colors should transform to yellow. The Striped pattern mutation, demonstrates its power when combined with butter - by heavily saturating and otherwise improving the yellow - compared to non-mutant Butters.

Important Note:

These images are not renderings of the actual animals being offered, (except for uniquely offered snakes found in the SURPLUS section of this web site). We do not provide pictures of individual hatchling snakes for sale, nor do we recommend that you ever choose a new pet based on an image of its neonatal form. Corns change so dramatically from hatchling to adult, they will NEVER have the same colors or contrasts throughout maturity. While most of the snakes we produce will mature to resemble the featured adult image(s) on our web site, unlike manufactured products that are respectively clones of each other, the nature of polygenic variation results in each animal being similar but not identical to others of its morph. The snake we select for you may not mature to be identical to the pictured examples, but will be chosen based on our experience of observing which neonates will mature to properly represent their respective morph. We take this responsibility very seriously, and therefore publish the guarantee that we will exchange your SMR snake if it does not mature to be like our advertised examples.
