

Striped Miami Motley (no aka)

Most Commonly Used Name: Striped Miami Motley

Mode of Genetic Inheritance: Selective Variation + Recessive Mutation

Morph Type: Selective Variant of Single Recessive Motley

Eye Color: Black pupil & *body ground colored* iris

OUR Striped Miami Motleys are just what the name suggests; Striped Motley corns in the brick red and gray Miami color scheme. The amount of striping can vary, but some of the Motley markings will be connected in striped fashion. These are selective variations of Motleys so the colors are products of selective breeding.

What to expect:

As with most corn snake neonates, expect young Striped Miami Motleys to be lackluster in color for at least one year, and considerably darker than their adult parents. All markings will be half (or less) what they will be as adults, but they do resemble the Miami Phase coloration scheme. None of them have the infamous bad appetites of wild caught Miami Locality corns, so stock up on pinky mice prior to receiving yours. The amount of striping is variable from dorsal Motley-striping between one or two markings TO dorsal Motley-striping nearly all the way.

Important Note:

The advertising images on our web site are representations of the average adult example of each morph. These images are not renderings of the actual animals being offered, (except for uniquely offered snakes found in the SURPLUS section of this web site). We do not provide pictures of individual hatchling snakes for sale, nor do we recommend that you ever choose a new pet based on an image of its neonatal form. Corns change so dramatically from hatchling to adult, they will NEVER have the same colors or contrasts throughout maturity. While most of the snakes we produce will mature to resemble the featured adult image(s) on our web site, unlike manufactured products that are respectively clones of each other, the nature of polygenic variation results in each animal being similar but not identical to others of its morph. The snake we select for you may not mature to be identical to the pictured examples, but will be chosen based on our experience of observing which neonates will mature to properly represent their respective morph. We take this responsibility very seriously, and therefore publish the guarantee that we will exchange your SMR snake if it does not mature to be like our advertised examples.
