

Striped Motley (no aka)

Most Commonly Used Name: Striped Motley

Mode of Genetic Inheritance: Recessive

Morph Type: Single Recessive

Eye Color: Black pupil & *body ground colored* iris

The Striped Motley overall pattern differs from the pattern scheme of most Motley mutants by having some markings that connect in striped fashion, but there is often less than three connected markings that render a striped look. These

What to expect:

Unlike most corn snake neonates, expect young Striped Motleys to be essentially miniature versions of their adult forms. Colors will saturate, and those that show trace amounts of black in their markings will lose virtually all black.

This image visually demonstrates the distinction between a Striped Amel and a Striped Amel Motley. Note the width of the dorsal stripe zone.

Important Note:

The advertising images on our web site are representations of the average adult example of each morph. These images are not renderings of the actual animals being offered, (except for uniquely offered snakes found in the SURPLUS section of this web site). We do not provide pictures of individual hatchling snakes for sale, nor do we recommend that you ever choose a new pet based on an image of its neonatal form. Corns change so dramatically from hatchling to adult, they will NEVER have the same colors or contrasts throughout maturity. While most of the snakes we produce will mature to resemble the featured adult image(s) on our web site, unlike manufactured products that are respectively clones of each other, the nature of polygenic variation results in each animal being similar but not identical to others of its morph. The snake we select for you may not mature to be identical to the pictured examples, but will be chosen based on our experience of observing which neonates will mature to properly represent their respective morph. We take this responsibility very seriously, and therefore publish the guarantee that we will exchange your SMR snake if it does not mature to be like our

advertised examples.
