

Sunglow (no aka)

Most Commonly Used Name: Sunglow

Mode of Genetic Inheritance: Recessive + Selective Variant

Morph Type: Single Recessive Mutation

Eye Color: Red pupil

Sunglow corn snakes are the products of selectively breeding Amel corns toward the goal of intensifying the red/orange coloration and eliminating the white blotch borders. Most have some white scales, but are generally two shades of the Amel color theme.

What to expect:

As hatchlings, they essentially appear to be typical Amel corns, with the exception of having little or no white on the borders between blotches and ground color zones. Some Sunglow corns actually lose some of that white through maturation. While we do not guarantee the extra gene mutation, we began our Sunglow line with Hypo corns, since our Hypos have such little black margins around the markings (which of course, translated to low white volume around the blotches of the Amel mutants in the line). Expect deeply saturated orange coloration and very little (if any) white scales between markings and ground color zones.

SURPLUS section of this web site). We do not provide pictures of individual hatchling snakes for sale, nor do we recommend that you ever choose a new pet based on an image of its neonatal form. Corns change so dramatically from hatchling to adult, they will NEVER have the same colors or contrasts throughout maturity. While most of the snakes we produce will mature to resemble the featured adult image(s) on our web site, unlike manufactured products that are respectively clones of each other, the nature of polygenic variation results in each animal being similar but not identical to others of its morph. The snake we select for you may not mature to be identical to the pictured examples, but will be chosen based on our experience of observing which neonates will mature to properly represent their respective morph. We take this responsibility very seriously,

and therefore publish the guarantee that we will exchange your SMR snake if it does not mature to be like our advertised examples.
