

{product id=987}

This 19" 2014 male Super Salmon Snow Corn is a shocking example of the **CORAL** color that's possible in some corn snakes. He would be an awesome contributor to the future project of reproducing super-pink Scaleless corns. He is currently eating frozen/thawed medium to large pinky mice. He is called SUPER because he is a homozygote (possesses both gene copies) of the mutation that causes the predominant exaggeration of pink/coral; Red Factor. His \$345.00 price includes .

< style="font-size: 12.1599998474121px; line-height: 15.8079996109009px;" />

Same snake in different pose. U.S. Dollar is in the pic for color reference.
