This 2013 female Tessera corn snake is now 31" long, eating unaltered frozen/thawed adult mice. Her parents were Amel Tessera X Buf and while some of her siblings were Buf and Mandarin Tesserases, I don't believe she inherited the Buf gene. She has been in brumation since November 6, 2015, so she should soon be warmed. Her \$365.00 USD price includes

Same snake in different pose.
